Security Injections @ Towson

Module: Software Development Lifecycle - CS0 C++

Student: Blessing Osereme Abumere

Date: 09/13/2022

ID: 1634801901

Discussion Questions

Where do you think security should fit into the SDLC?

Every Step in SDLC.

Why is security more of a concern than it was 10 years ago?

Because much can be lost due to lack of security. 10 years ago the internet was not as widely used as it is in present day .

If a program has no syntax errors, can we assume that it is secure? Why or why not?

No. The program can still have logic errors which can still make it very vulnerable.

Compare software security and security software.

Software security is security hard-coded into an already existing software. Security software is external software designed to work alongside already existing software.
